32°N SUNGLASSES

- o The 32°N Sunglasses are the first (and only) adaptive focus sunglasses
- o Have you ever worn your reading glasses over your sunglasses? 32°N sunglasses are made for you
- o Seamlessly switching from Plano sunglasses to reading sunglasses with a single swipe. AND they look good

THE 32°N APP

- Set your personal prescription using the 32°N app
- Stay in the loop and keep your glasses' software up to date with new features and improvements
- Update glasses prescription whenever it changes

SO WHY CHOOSE 32°N SUNGLASSES?

- Say goodbye to the hassle of carrying multiple glasses every time you step out
- 32°N uses the entire lens for distance vision without any transitions between zones
- Skip the search for reading glasses every time you receive a message. Switch seamlessly from sunglasses to readers with just one touch
- If your prescription changes, you can easily update your settings using the 32°N app

TECHNOLOGY

32°N are equipped with Deep Optics' novel and patented Liquid Crystal tunable lens technology. This allows dynamic focus changing from 0 to 2.5 diopters with a 0.25D precision.

WHO WE ARE

Based out of Israel, Deep Optics is the technology company behind 32°N's adaptive optics. We developed this patented technology to revolutionize human vision correction.

We believe glasses should adapt to people, and 32°N is the first product embodying this approach. We are constantly developing new technologies and solutions to make our vision a reality.

THE FIRST (AND ONLY) ADAPTIVE FOCUS SUNGLASSES

*"Amazing invention.
These sunglasses are
amazing. I love them.
Highly recommended."*

Jaye | Singapore

*"I took my 32°N on a short
trip to Miami beach. They
were great for reading on
the beach and biking."*

Daniel | United States

*"My 32°N are essential
to my daily routine and the
first thing I reach for when
getting in my car."*

Harry | Western Australia

*"My 32°N helped me
to read the menu and enjoy
a lemon tea in Nepal on my
way to Everest base camp."*

James | South Korea
